

## History of Water Brooms

I was given a water broom over 30 years ago. While I greatly enjoy using it I always felt there was something missing in the way it worked. I thought there might be a better paradigm for using garden hose water pressure to clean driveways and other surfaces.

After much trial and error the game changing H2O Broom was created. Check back of brochure to view some of the goals that were addressed and achieved.

Note: The H2O Broom comes in 2 models. Water Saver and Heavy Duty (for mud).
